

What others can't do

MARVELS integrates seamlessly into existing Microsoft environments and offers maximum flexibility through the Azure DevOps standard. Experience true agility without compromising on compliance – because we combine both in a single system.

Cloud operations are handled with us as your German partner to ensure the highest data protection and security standards. Exclusive AI features further enhance efficiency and productivity – for a digital working environment that thinks ahead.

Are you ready for the digital transformation of your validation? Let's take your processes to the next level together!

MARVELS

**The next generation of
Digital Validation**

Rely on a validation solution that can do more: MARVELS combines the strengths of Microsoft Azure DevOps and Modern Requirements into a powerful cloud platform – configured and administered by Syncwork. This allows you to benefit from maximum flexibility, security, and innovative power.

Your benefits at a glance

- **Seamless integration of agility and compliance**
MARVELS integrates agile methods such as Scrum and Kanban directly with validated processes based on the V-model – for maximum efficiency and regulatory security.
- **Fast start, immediate productivity**
Thanks to our standard process template, you can get started right away. Additional templates – for example, for classic V-model processes with targeted agility – are already in development.
- **Cloud-based and future-proof**
No local IT infrastructure required. We take care of updates, maintenance, and administration. You can focus entirely on your core business.

„Anyone who wants to shape the future of their validation needs solutions that act agilely, protect securely, and anticipate intelligently – that’s exactly where true transformation begins.“

Reiner Strauß, Head of Life Science

- **Modern Requirements – exclusively integrated**
Benefit from the only requirements management solution that is directly integrated into Azure DevOps. Features such as Smart Docs, Review Management, Test Hub, Trace Analysis, and AI-powered assistants (e.g., Copilot4DevOps) increase your productivity and quality.
- **Experience & partnership**
As an established partner of Modern Requirements, we receive updates and expertise first-hand – and pass this advantage directly on to you.

**Innovation that integrates seamlessly.
Efficiency that inspires.**
